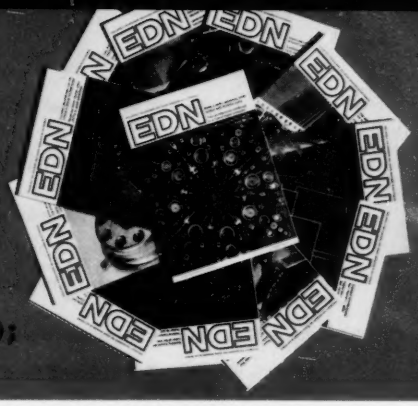
Article Index, January—June, 1974



NOTES:
C (Circuit Design Award); F (Design Feature); N (News); P (Progress in Products)

Circuits/Circuit Design

A low-cost position encoder. February 5, pg. 94 (C)

A safer analog-to-digital interface. March 5, pg. 74 (C)

A self-regulating, temperature-stabilized reference. May 20, pg. 74 (C)

A simple absolute-value amplifier. June 20, pg. 78 (C)

A simple method for initializing CMOS storage elements. February 20, pg. 83 (C)

Analog dividers: what choice do you have? May 5, pg. 55 (F)

Analog multipliers determine true wind speed. April 20, pg. 69 (F)

Analog signal controls pulse delay. February 5, pg. 96 (C)

Automatic battery charger shuts itself down. May 20, pg. 77 (C)

Automobile electronics: choosing the right technology. January 5, pg. 46 (F)

Build your own digital stopwatch with strobed LED readout. April 5, pg. 55 (F)

Caution: care needed when using lowest cost analog dividers. April 20, pg. 47 (F)

Charge redistribution technique can produce an all-MOS A/D converter. March 5, pg. 21 (N)

Check Norton amplifiers quickly. March 5, pg. 72 (C)

Circuit indicates logic "ready." March 5, pg. 72 (C)

Circuit monitors motor speed and warns of impending failure. April 5, pg. 65 (F)

Clamp fast pulses with one component. April 5, pg. 76 (C)

Clocking scheme improves power supply short-circuit protection. March 5, pg. 49 (F)

CMOS "D" flop makes latch "AND" gate. April 20, pg. 89 (C)

CMOS offers new approach to commutating filters. February 5, pg. 94 (C)

Company success or failure can depend on product testability. February 20, pg. 53 (F)

Current limit and foldback for small motor control. May 5, pg. 77 (C)

Cut resistor trimming costs in precision analog circuits. June 20, pg. 63 (F)

Design contest aims to show that custom IC's can be relatively inexpensive and easy to design. June 20, pg. 24 (N)

Designers' Guide to: Active bandpass filters (Pt. 1). February 5, pg. 68 (F)

Designers' Guide to: Active bandpass filters (Pt. 2). March 5, pg. 40 (F)

Designers' Guide to: Active bandpass filters (Pt. 3). April 5, pg. 46 (F)

Designers' Guide to: Active bandpass filters (Pt. 4). May 5, pg. 63 (F)

Designers' Guide to: Active bandpass filters, (Pt. 5). June 5, pg. 65 (F)

Designers' Guide to: Basic AGC amplifier design. January 20, pg. 72 (F)

Designers' Guide to: Digital filters (Pt. 1). January 20, pg. 30 (F)

Designers' Guide to: Digital filters (Pt. 2). February 20, pg. 65 (F)

Designers' Guide to: Digital filters (Pt. 3). March 20, pg. 51 (F)

Designers' Guide to: Digital filters (Pt. 4). April 20, pg. 57 (F)

Designers' Guide to: Digital filters (Pt. 5). May 20, pg. 61 (F)

Designers' Guide to: Digital filters (Pt. 6). June 20, pg. 69 (F)

Designers' Roundtable—Low-power logic: Where it is, and where it's going (Part 1). May 20, pg. 35 (F)

Differential cascode amplifier offers unique advantages. June 5, pg. 78 (C)

Do complex impedance matching in seven easy steps. March 20, pg. 73 (F)

Do we really need a new analog interface standard? April 5, pg. 24 (N)

Dual-polarity pulses from TTL logic. April 20, pg. 91 (C)

ECL circuits drive light-emitting diodes. January 20, pg. 80 (C)

Erroneous sequence correction for Johnson counters. June 5, pg. 82 (C)

Fast Fourier Transform primer provides physical picture of FFT. May 20, pg. 47 (F)

Ferrite bead makes cheap current transformer. March 20, pg. 85 (C)

FET current sinks raise operating points. February 20, pg. 81 (C)

FET op amp adds new twist to an old circuit. June 5, pg. 75 (F)

Flux-feedback solves transformer imbalances and simplifies design. April 5, pg. 61 (F)

High-speed JFET analog switches require advanced driver designs. February 5, pg. 76 (F)

IC timer gates high-frequency SCR circuit. January 5, pg. 82 (C)

ISSCC promises mixed bag of technology advances. February 5, pg. 28 (N)

Low-frequency, low-noise amplifiers for very high-Z capacitive sources. March 5, pg. 22 (N)

Low-power counter is programmable over wide range. March 20, pg. 83 (C)

Novel circuit provides short-circuit protection. June 5, pg. 84 (C)

One extra resistor gives 555 timer 50% duty cycle. March 5, pg. 74 (C)

Op-amp and transistor provide 2-axis nonlinearity. January 5, pg. 81 (C)

Op amp has 16-step digital gain control. May 5, pg. 75 (C)

Op amp makes visual level indicator. May 5, pg. 73 (C)

Operation and application of parallel-T current-gain filters. January 5, pg. 72 (F)

Phase-lock loops test bandpass filters. June 20, pg. 76 (C)

Reduce multiplier errors by up to an order of magnitude. March 20, pg. 65 (F)

Reduce size, weight and power with custom hybrids. January 20, pg. 60 (F)

"S"-shaped sawtooth oscillator. February 20, pg. 83 (C)

Sample-and-hold circuit features good accuracy. January 5, pg. 80 (C)

Serrasoid frequency modulator IC: revolution in transceiver design? March 5, pg. 65 (F)

7-segment-to-BCD decoder uses pROM. June 20, pg. 76 (C)

Shift registers can be designed using RAM's and counter chips. January 5, pg. 64 (F)

Simple IC performs both frequency division and selection. January 5, pg. 84 (C)

Single diode compensates IC oscillator. April 20, pg. 87 (C)

Single switch controls two functions. April 5, pg. 78 (C)

Symmetrical CMOS clock is inexpensive. March 20, pg. 80 (C)

Synchronizing CMOS oscillators can be simplified. February 20, pg. 85 (C)

Ten step sequential interval timer. March 20, pg. 78 (C)

Ten ways to insure premature old age in digital IC's. February 20, pg. 75 (F)

Test your op amp IQ. March 5, pg. 55 (F)

Tester for balanced audio lines. April 5, pg. 80 (C)

Two IC's and FET provide quad stable reference. January 20, pg. 82 (C)

Understanding the basics of Gunn oscillator operation. May 5, pg. 40 (F)

Use current-mode op amps in reference circuits. June 20, pg. 80 (C)

Use these latest techniques to improve your GHz circuits. January 5, pg. 56 (F)

VFO adds versatility to TV sync generator. May 20, pg. 70 (C)

Voltage-to-frequency converters: A/D's with advantages. June 5, pg. 49 (F)

What electronic devices face in the automobile environment. January 5, pg. 28 (F)

Wide range time measurements simplified. February 5, pg. 95 (C)

Communications

Computer-controlled instruments challenge designer's ingenuity. March 5, pg. 32 (F)

Designers' Guide to: Digital filters (Pt. 1). January 20, pg. 30 (F)

Designers' Guide to: Digital filters (Pt. 2). February 20, pg. 65 (F)

Designers' Guide to: Digital filters (Pt. 3). March 20, pg. 51 (F)

Designers' Guide to: Digital filters (Pt. 4). April 20, pg. 57 (F)

Designers' Guide to: Digital filters (Pt. 5). May 20, pg. 61 (F)

Designers' Guide to: Digital filters (Pt. 6). June 20, pg. 69 (F)

Electron-beam fabrication improves surface-wave filter. April 20, pg. 16 (N)

Fiber optic transmission systems contest wire for communications. March 5, pg. 20 (N)

Poor man's synchronous communication satellite. January 5, pg. 23 (N)

Serrasoid frequency modulator IC: revolution in transceiver design? March 5, pg. 65 (F)

39 GHz voice and data communication approaches commercial usage. April 20, pg. 17 (N)

Tunable lasers open the way for advanced communication and spectroscopic applications. February 5, pg. 26 (N)

Components/Modules

Analog dividers: what choice do you have? May 5, pg. 55 (F)

Analog multipliers determine true wind speed. April 20, pg. 69 (F)

Analog multipliers: great design tools—becoming less expensive. February 20, pg. 34 (F)

Caution: care needed when using lowest cost analog dividers. April 20, pg. 47 (F)

Differential-input 8-channel multiplexer for flexible and economical data acquisition. April 5, pg. 85 (P)

Fabricating nonstandard coaxial cables. April 5, pg. 76 (C)

Ferrite bead makes cheap current transformer. March 20, pg. 85 (C)

Modular power supplies: giving so much while asking so little. June 20, pg. 36 (F)

"Naked" A/D offers high accuracy, increased versatility and low price. May 20, pg. 80 (P)

One piece "Solid-State" connector handles up to 600 connections/in.^{2}. April 5, pg. 20 (N)

Potentiometers: changing to meet today's needs. February 5, pg. 36 (F)

Reduce multiplier errors by up to an order of magnitude. March 20, pg. 65 (F)

Small (to 2.5 kVA) power transformer designs can be ready in minutes. February 5, pg. 30 (N)

Switches, pots, resistors and interconnects combined on film to reduce assembly labor. January 20, pg. 21 (N)

Unique camera battery could solve many problems for space-conscious designers. January 20, pg. 86 (P)

Voltage-to-frequency converters: A/D's with advantages. June 5, pg. 49 (F)

Computers/Data Processing

Algorithm derives logs with 4-function calculator. January 20, pg. 78 (C)

Computer-controlled instruments challenge designer's ingenuity. March 5, pg. 32 (F)

Computers and terminals shrink in size to meet the demands of an expanding market. May 5, pg. 20 (N)

DEC changes the rules for the micro/mini market. May 5, pg. 81 (P)

Design D/A and A/D interfaces for your computer. April 5, pg. 34 (F)

Designers' Guide to: software for the hardware designer—Part 1. June 5, pg. 40 (F)

EDN μP Design Series—Don't overlook the 4-bit μP: they're here and they're cheap. February 20, pg. 44 (F)

EDN μP Design Series—Survey of microprocessors reveals limitless variety. April 20, pg. 38 (F)

EDN μP Design Series—The Intel 8080: first of the second-generation microprocessors. May 5, pg. 30 (F)

EDN μP Design Series—What can you do with a microprocessor? March 20, pg. 42 (F)

Experts predict the future course of microprocessor components. February 20, pg. 24 (N)

Full-function electronic slide rule sets new $ standard. February 20, pg. 88 (P)

Honeywell takes on IBM. June 5, pg. 15 (N)

Is the Arabic-decimal system adequate to meet today's needs? February 5, pg. 86 (F)

John Lalley of Siemens, Computest Products speaks out on semiconductor memory testing. June 5, pg. 57 (F)

Logs and antilogs with simple calculators. April 20, pg. 87 (C)

Microfilm system speeds IC user's design process. April 5, pg. 84 (P)

Microprocessors are rapidly gaining on minicomputers. May 20, pg. 16 (N)

Minis move over. Here comes a new generation of microcomputers. January 20, pg. 25 (N)

Monolithic analog memory comes in standard 16-pin DIP package. April 20, pg. 92 (P)

Need a low-cost, versatile custom test system? Use a microprocessor. February 5, pg. 58 (F)

New compound promises 100X speed increase for bubble memories. January 20, pg. 20 (N)

1974 NCC Emphasizes computer productivity for the user. April 20, pg. 30 (F)

Parallel microprocessors improve hybrid computer performance. June 5, pg. 14 (N)

Pocket-sized programmable calculator stores 100 program steps. February 20, pg. 88 (P)

Shift registers can be designed using RAM's and counter chips. January 5, pg. 64 (F)

Survey of 8-bit microprocessors reveals wide choice for users. June 20, pg. 44 (F)

Technological turmoil caused by LSI microprocessors and 4k RAM's. June 20, pg. 25 (N)

256-bit CMOS RAM opens new design opportunities. April 20, pg. 92 (P)

Understand the 8-bit μP: you'll see a lot of it. January 20, pg. 48 (F)

Displays

A fresh look at displays and readouts. May 20, pg. 24 (F)

Added features push DPM's toward the instrument category. March 5, pg. 79 (P)

Build your own digital stopwatch with strobed LED readout. April 5, pg. 55 (F)

Color CRT enables greatly improved range of data display. June 20, pg. 20 (N)

Color-TV CRT's deliver a picture in 5 sec without preheating. February 20, pg. 28 (N)

Panel-meter users and makers tell how to select wisely. June 5, pg. 24 (F)

Instrumentation

Digital-display scope monitors up to 8 channels of logic. January 5, pg. 88 (P)

High-speed programmable dc voltage calibrator settles in 100 μsec, provides 0.01% "worst-case" accuracy. May 5, pg. 81 (P)

Optiranging removes the guesswork from frequency counter reading. June 5, pg. 86 (P)

Panel-meter users and makers tell how to select wisely. June 5, pg. 24 (F)

Programming the pROM: a make or buy decision. March 5, pg. 59 (F)

Readily available benchtop IC tester combines low costs and simplicity. June 20, pg. 84 (P)

Reliable, high-quality frequency counters at prices anyone can afford. March 20, pg. 88 (P)

Spectrum analyzer-calculator reads relative amplitude and frequency deviation directly. May 5, pg. 80 (P)

Sweep generator for everyone has more features, cost fewer $. March 20, pg. 89 (P)

3-1/2-digit DMM offers an alternative to analog meters for a few extra $. March 5, pg. 78 (P)

Timing-generator system benefits users by employing digital approaches for control of both period and width/delay. January 5, pg. 89 (P)

Neal Vinson of Data Test speaks out on today's real world of testing. February 5, pg. 50 (F)

Wideband-high gain oscilloscope and vectorscope in one—and all at a low price. June 5, pg. 86 (P)

Management/Interface

Design Interface—Even in crisis there's opportunity. February 20, pg. 59 (F)

Design Interface—Product manager: a friend in need! May 20, pg. 51 (F)

Design Interface—The energy shortage: what will it mean to electronic manufacturers? January 20, pg. 40 (F)

Electronic Component Leadtime Index. January 20, pg. 65

Electronic Component Leadtime Index. February 20, pg. 79

Electronic Component Leadtime Index. March 20, pg. 61

Electronic Component Leadtime Index. April 20, pg. 65

Electronic Component Leadtime Index. May 20, pg. 45

Electronic Component Leadtime Index. June 20, pg. 61

Environment, energy and the need for new technology. June 20, pg. 53 (F)

Europe: an important power semiconductor growth market. May 5, pg. 23 (N)

IEEE Intercon and NEREM agree on 1976 Boston Conference. February 5, pg. 31 (N)

IEEE Intercon '74 "Getting Down to Business." March 20, pg. 14 (N)

Microfilm system speeds IC user's design process. April 5, pg. 84 (P)

Materials

CCD and MNOS combined to form an analog transversal filter. March 5, pg. 20 (N)

GaAs MESFET's: The key to the next generation of super-fast IC logic? March 5, pg. 24 (N)

How much smaller can digital IC's be made: According to one scientist, there is a limit. March 5, pg. 22 (N)

Molecules: the smallest electronic components? June 5, pg. 17 (N)

One piece "Solid-State" connector handles up to 600 connections/in.^{2}. April 5, pg. 20 (N)

Optical IC's: a coming technology. May 20, pg. 20 (N)

Pre-punched pc boards bring lower production cost. April 20, pg. 18 (N)

Superconductivity achieved at highest recorded temperature yet. April 20, pg. 16 (N)

Switches, pots, resistors and interconnects combined on film to reduce assembly labor. January 20, pg. 21 (N)

Packaging

Component marking system prints up to 20,000 components per hour. June 5, pg. 87 (P)

Electron-beam fabrication improves surface-wave filter. April 20, pg. 16 (N)

Fabricating nonstandard coaxial cables. April 5, pg. 76 (C)

Reduce size, weight and power with custom hybrids. January 20, pg. 60 (F)

What electronic devices face in the automobile environment. January 5, pg. 28 (F)

Semiconductors

A low-cost position encoder. February 5, pg. 94 (C)

A 1/2M bit optical scanner uses bucket brigade technique. March 5, pg. 26 (N)

Advancements on all fronts heard at the 1973 Electron Devices Meeting. January 5, pg. 20 (N)

Automobile electronics: choosing the right technology. January 5, pg. 46 (F)

CCD and MNOS combined to form an analog transversal filter. March 5, pg. 20 (N)

Charge-coupled devices: Will they ever make it? Experts say yes! May 5, pg. 16 (N)

Charge redistribution technique can produce an all-MOS A/D converter. March 5, pg. 21 (N)

CMOS "D" flop makes latching "AND" gate. April 20, pg. 89 (C)

CMOS offers new approach to commutating filters. February 5, pg. 94 (C)

Design contest aims to show that custom IC's can be relatively inexpensive and easy to design. June 20, pg. 24 (N)

Designers' Guide to: Active bandpass filters (Part 1). February 5, pg. 68 (F)

Designers' Guide to: Active bandpass filters (Part 2). March 5, pg. 40 (F)

Designers' Guide to: Active bandpass filters (Part 3). April 5, pg. 46 (F)

Designers' Guide to: Active bandpass filters (Part 4). May 5, pg. 63 (F)

Designers' Guide to: Active bandpass filters (Part 5). June 5, pg. 65 (F)

Designers' Roundtable—Low-power logic: Where it is, and where it's going (Part 1). May 20, pg. 35 (F)

Dual-polarity pulses from TTL logic. April 20, pg. 91 (C)

ECL circuits drive light-emitting diodes. January 20, pg. 80 (C)

EDN μP Design Series—Don't overlook the 4-bit μP: they're here and they're cheap. February 20, pg. 44 (F)

EDN μP Design Series—Survey of microprocessors reveals limitless variety. April 20, pg. 38 (F)
